## TOMÁŠ PALOU

Worked with: Firm name

A complex design consists of containers hung above each other and a detachable reservoir tank. A rope to hang the flower pot works as an irrigation knot as well. The designed construction enables the herbs to be watered by gravity while redundant water is kept in the reservoir tank. There are peat tablets and herb seeds in the containers which make a firm case before assembling. The plant pot is printed of plastic that is easily decomposable in nature.

## RICHARD SEKERÁK

Worked with: Firm name

Kylo on Footprint points to the solution of diet and obesity nowadays. Sitting to show you whether you are right with the weight. Kylo will tell you about you. Neither obesity nor diet is the best solution, so will this session tell you whether? "Obesity will show your anus, or you will not feed a single thread with a diet."  
Sitting works on the principle of gums and pillows, with a large weight on the pillow acts a force that stretches the rubber and so the person sees his sitting, when loaded with a small weight does not pull one of the gums. Does not show that the weight will show you that shape. Do you want to know how much kilo you have, try sitting KYLO.kilo you have, try sitting KYLO.
